DETAILED ACTION

Applicant's arguments with respect to claims 1-8 and 10-41 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 11, 21, 22 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,825,02, to Hansma et al. (Hansma).

Hansma discloses a scanning microscope for scanning a specimen comprising a light source 32 for generating a focused light beam (col. 2, line14-17) defining a beam path of a light beam intensity (Fig. 1); means for scanning the beam across a specimen region of the light beam; and a passive optical element disposed along the beam path 38 for regulating the light beam intensity by determining a function of the current axial focus position (col. 5, line19-25).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2878

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10, 12, 28 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansma et al.

Hansma fails to disclose the exact optical element used to regulate the intensity of the light beam. It would have been obvious for one of ordinary skill in the art to replace the optical element of Hansma with either of the claimed optical elements, since they are functionally equivalent.

Allowable Subject Matter

Claims 3, 5-8, 13-20, 23-27 and 31-41 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
